"Fast Work" - service for find part-time jobs

Introduction

Web applications for job search. Allows you to look for part-time jobs from employers on a freelance basis, only for work in various fields and offline.

Functionality

The app must implement the following the main functions
1. with work:
   - View list of work by type
   - View list of work by location
   - View list of work nearby
   - Find work by name or part of name
   - Submitting a work
   - Check status submission a work
   - Add new work
   - Edit work
   - Delete work
2. with worker:
   - Offer worker for work
   - View all submitted worker for job
   - Send feedback about hirer

Model

The app must contain several models for work, and models will represent the main business object. In specification will not describe base domain, only main.

1. Work

This model represents a work object that is created by a user with the role of hirer or admin. This model will be displayed to users and they will be able to respond to it.
Model must contain field:
1. id
2. name
3. describe
4. location
5. count worker
6. datetime work
7. price
8. status
9. hirer
10. type work
11. date create

2. Worker

This model represents a worker-like object. Workers can get work if the hirer chooses him or her.

Model must contain field:
1. id
2. name
3. soname
4. age
5. phone
6. email
7. status
8. date create

For this model will be created submodel with worker info and it's model will be contained filed like information about worker, with experience, last work, and etc.

Scenarios for main functions

1. Work

View list of work by type.

The worker in the menu section will be able to select an item with a work. On the page that will be displayed there will be links to various categories of work.

View list of work by nearby

The worker in the menu tab, will be able to select the work item next. After approval of obtaining the current geolocation, will be redirected to the page with jib search result next.

View list of work by location

The user in the menu tab, will be able to select the item work by city. Then it will be redirected to a page with links to available cities.

Find work by name or part of name

The top section has a field for entering text. After entering, you are redirected to the page with the search result.

Submitting a work

When a user responds to a job, the employer receives a notification, and he can approve or reject it. After that, the user will receive a notification

Check status submission a work

The user on the tab my work, will be able to see the responses to the applications that he submitted

Add new work

The hirer in his profile clicks on the button to add a work. After filling in the data, send it for moderation. Once approved, it is released to the public.

Edit work
The hirer in his profile clicks on the button with the list of jobs, and on the selected one he clicks the "Edit" button, and redirects to the page with editing.

Delete work
The hirer in his profile clicks on the button with the list of jobs, and on the selected one he clicks the "Delete" button, and redirects to the page with the list of jobs that he has issued.

2. Worker
Offer worker for work
The employer, on the page with an open job, clicks on the button with the list of applications, after which he clicks on the "Accept" button on the selected one.

View all submitted worker for job
The hirer, on the page with an open job, clicks on the button with the list of applications, after which he is redirected to the page with the list of abandoned applications

Send feedback about hirer
The worker after the work performed and confirmation of this can leave a review about the employer. After clicking on the "Done" button, he is invited to leave a review about the hirer.
